

MOBEYE APPLICATION SHEET

Applications for measuring, control and alerts

MOBEYE

GSM CABINET ALARM

Keep an eye on improper access

Do you have stuff in the closet, and you'd rather not want others to touch it? And do you want to know when that happens?

The Mobeye CM-Guard is a practical and simple solution for this application. By hiding the compact unit in the cabinet and connecting a magnetic contact, it is possible to be informed by phone as soon as the door opens.

Security made easy!

Mobeye CM2000

Mobeye GSM alarm module: Universal GSM dialler with (NO/NC) inputs; can run fully battery-operated for a long time.

Magnetic contact

Door/window magnetic contact

How it works

- Provide a SIM card (prepaid or an affordable subscription).
- Insert the SIM card and the batteries in the Mobeye CM-Guard.
- Attach the wires of the magnetic contacts in the input.
- Attach one side of the magnetic contact on the door and one in the closet. Make sure the magnet contacts engage when the door is closed.
- Program at least one emergency number, by sending a simple SMS command to the unit.
- From now on you will receive an SMS and / or call as soon as the door opens and the magnetic contact breaks.
- And you want the cabinet only guarded at night or in the weekend? Then you program schedules in the unit!
