

## Mobeye water alarm

### CM4300 Mobeye WaterGuard

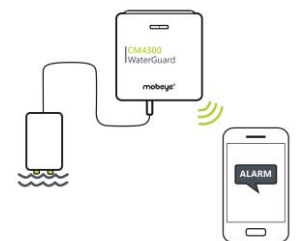

The archive, the wine or the holiday stuff; there are often valuables in the basement. Excellent storage, as long as it stays dry. Mobeye leakage monitoring alerts you to water in the basement and helps prevent subsequent damage

#### Mobeye basement alarm

- CM4300
- PSU adapter (optional)
- Mobeye SIM/Portal service

#### Instant alarming in the situation of a water leak

The Mobeye WaterGuard alarms as soon as the water sensor detects water-based liquids. The device contains an integrated 4G LTE-M/2G communication module. The notification arrives on the phone as a push message via the Mobeye Messages App, alternatively as call, SMS text message or email.

#### Power failure monitoring

The Mobeye WaterGuard can work for a year on the (supplied) set of batteries. It is possible to connect external voltage. By simply plugging the power adapter into the socket, the voltage source is immediately monitored. In the event of a power failure, an alarm is generated and the batteries take over. Alarm messages and test messages will then still be sent.

#### CM4300 versus CM4300-FS

The Mobeye CM4300 is extremely suitable for the detection of small amounts of water. In very humid environments we recommend the CM4300-FS. This has a float sensor and reacts if the difference in the water level is a few centimeters.
